

I understand that there is an attempt to lessen satellite radio's (particularly XM Radio) ability to broadcast certain areas allowed in other broadcasting methods and I'd like to say this is not right. I subscribe to XM Radio as a choice because of it's ability to not only have the type of programing I enjoy, which is rare with local stations, but also so I can listen to the same thing at home, in my car, no matter where I go. I do travel a lot by auto and with satellite radio I can have weather, road reports in many of the cities I travel in as well as my type of program without the need to hunt for something that may or may not be there on local stations.

Thanks,

Robert Hill
